

# What is in a Vaccine?

The following is a partial list:

## Mercury (Thimerosal)

One of the most poisonous substances known to man. Collects in the brain, gut, liver, bone, and kidneys. Extremely toxic to nerves. Related to Autism.

## Phenol/Phenoxyethanol (2-PE)

Antifreeze. Wrecks immune system's primary response mechanism.

## Aluminum

Associated with Alzheimer's disease, dementia, seizures and coma. Also, implicated with human breast cancer cells.

## Monosodium Glutamate (MSG)

A known neurotoxin. Possible mutagenic, teratogenic and reproductive defects.

## Ammonium Sulfate (Salt)

Associated with gut, liver, nerve and lung poisoning.

## Polysorbate 80

Causes cancer in test animals. Carcinogenic. Used as an adjuvant in some flu vaccines.

## Gelatin

Can cause extreme allergic reactions when injected directly into the blood stream.

## Neomycin Sulfate (Antibiotic)

Vitamin B6 disruptor. B6 malabsorption related to epilepsy and mental retardation.

## Tri(n)butyl-phosphate

Poisonous to kidneys and nerves.

## Glutaraldehyde

Poisonous to humans. Causes birth defects in test animals.

## Beta-propiolactone

Carcinogenic. Related to gut, liver, respiratory, skin and sense organ poisoning.

## Latex Rubber

Anaphylactic shock related to serious latex allergy.

## Formaldehyde (Formalin)

Toxic to every cell in the human body. Probable carcinogen. Linked to leukemia, brain, colon and lymphatic cancers.

## Genetically modified yeast, animal, bacterial & viral DNA

Suspected of causing known and unknown genetic mutation.

## Micro-organisms

Polio was contaminated with SV40 (a monkey virus) now showing up in human bone, brain tumors, lung lining (mesothelioma), and lymphoma.

## Gentamicin Sulfate & Polymyxin R (Antibiotic)

Toxic to kidneys. Can cause life threatening reactions.

## Human & Animal Cells\*

Viral agents are grown in human and animal cells. Some of which come through with the viral agent in the vaccine cocktail. A suspicious cause of auto-immune disease.

\*The ever increasing number and doses of vaccines is directly related to the ever increasing number of autoimmune diseases.
